Manoj Kumar : An Environmental Risk Assessment Study from North India: Health risk assessment due to pollutants before purchasing it in order to gage whether or not it would be worth my time, and all praised An Environmental Risk Assessment Study from North India: Health risk assessment due to pollutants:

In the developed world, life expectancy has increased substantially during the last century. Deaths due to infectious diseases also declined in these countries whereas deaths due to cancer and other cardiovascular diseases increased. With the rising socio-economic status, similar health transition is occurring in some of the developing countries. In India, though infectious diseases continue to be a public health problem but an increase in the occurrence of non-communicable diseases has also been noted particularly in urban areas and in economically advanced states.

About the Author Dr Manoj Kumar has obtained his PhD from the School of Public Health, Department of Community Medicine, Postgraduate Institute of Medical Education and Research (PGIMER), Chandigarh in 2004. He has worked in different international research projects. Presently working as Assistant Professor, Centre for Public Health, Panjab Univ. Chandigarh, India.
