Professor Cassandra White : An Uncertain Cure: Living with Leprosy in Brazil (Studies in Medical Anthropology) before purchasing it in order to gage whether or not it would be worth my time, and all praised An Uncertain Cure: Living with Leprosy in Brazil (Studies in Medical Anthropology):

In many cultures, leprosy elicits fear, stigma, and misunderstanding. Historically, people affected by leprosy were banished or isolated from the rest of society. Although the worldwide incidence of leprosy has declined markedly over the past quarter century with the advent of new multidrug therapies, developing nations are still encountering a high number of cases. In *An Uncertain Cure*, Cassandra White goes deep into the shantytowns of Rio de Janeiro to give a riveting account of the contemporary leprosy experience among poor and working class Brazilians. In this ethnographic treatment of leprosy sufferers, White exposes the web of historical, socioeconomic, religious, and political forces that complicate the path to wellness and perpetuate high rates of infection. Drawing on nearly ten years of research, White shows how anthropological research can contribute to more effective treatment of chronic infectious diseases around the world.

"This carefully and thoroughly researched book presents a sensitive, insightful, and welcome contribution to the study of leprosy treatment and the treatment by society of those affected by the disease." --Judith Justice, author of *Policies, Plans, and People: Foreign Aid and Health Development*
About the Author
Cassandra White is an assistant professor of anthropology at Georgia State University.
