Shauna C. Anderson PhD, Keila B. Poulsen MT(ASCP)SH CLS(NCA) : Anderson's Electronic Atlas of Hematologic Disorders before purchasing it in order to gauge whether or not it would be worth my time, and all praised Anderson's Electronic Atlas of Hematologic Disorders:

4 of 5 people found the following review helpful. Disappointing By David T. Adams I'm in medicine and encounter hematological conditions all the time. This CD looked like an excellent way to enhance my knowledge and sharpen my diagnostic skills in hematology. The CD is designed to be highly interactive, covering all the major hematological disorders and illustrating them with photomicrographs and "concept applications" (ie, case studies). Sounded great! Unfortunately, though the principle of using the power of the computer in such a way was sound, the execution in this CD is terrible. The interface is clunky and limited. The photomicrographs carry no annotations - you have to

figure out what you are looking at and hope you are right. The information is sketchy and in outline form. The case applications are mere one paragraph descriptions (in most cases the same - "fatigue, shortness of breath, and weakness") followed by a typical CBC that would be found in each particular disorder, no further elaboration. And the kicker is the pricetag: \$...! Save your money and put it toward Diagnostic Hematology: a pattern approach. 5 of 5 people found the following review helpful. Wonderful tool for student
By Rebecca Henderson
I am really glad that I did not pay attention to the previous review "disappointed". The electronic Atlas is designed for students, not those already in the medical profession. I found this to be a priceless supplement to the instructional manuals I am using for a Hematology class. The layout is clear and concise, no overly verbose theory to deal with, just the facts. I was so pleased that I also bought the softcover Atlas of Hematology and recommended it to others in my class. Thanks for creating great learning tools.

This CD-ROM atlas is a valuable companion to Anderson's Electronic Atlas of Hematology and Anderson's Atlas of Hematology. Structured by disorder, each listing includes a description of the clinical features, pathology, laboratory features (including morphologic characteristics), treatment, and a case study. Each disorder is then followed by various morphologic illustrations, which allow the user to build interpretative and evaluative skills. Other features include case quizzes along with 130 concept applications, over 100 image-based questions including rationale for correct answers, and two animated slide shows. This program will run on any IBM-PC or compatible computer that minimally includes: a Pentium II processor (Pentium III recommended); 128 MB RAM; Windows 98, NT, 2000, ME, or XP; CD-ROM drive; 1024x768 monitor resolution; mouse; and 150 MB of hard-disk space. Internet Explorer and Flash 6 are also required but are included on the CD-ROM as installation options. Compatibility: BlackBerry OS 4.1 or Higher / iPhone/iPod Touch 2.0 or Higher / Palm OS 3.5 or higher / Palm Pre Classic / Symbian S60, 3rd edition (Nokia) / Windows Mobile Pocket PC (all versions) / Windows Mobile Smartphone / Windows 98SE/2000/ME/XP/Vista/Tablet PC
