**Linda M. Merriman MPhil DPodM MCHS Cert, Warren Turner BSc(Hons) DpodM : Assessment of the Lower Limb, 2e** before purchasing it in order to gage whether or not it would be worth my time, and all praised Assessment of the Lower Limb, 2e:

The Second Edition of this highly respected and well-established guide to lower limb examination and assessment provides completely revised and comprehensive coverage of the subject. Bringing together a range of leading clinical experts to examine the stages which must be gone through to arrive at an accurate diagnosis, Assessment of the Lower Limb contains, clearly and conveniently in one authoritative volume, a unique holistic view of the subject with many photographs and line drawings to supplement the text, and case studies to illustrate the theory. The problems of differential diagnosis are explained and supported by descriptions of the most common pathologies. The extensive

updating for this new edition takes into account developments in the subject at undergraduate level and ensures that students, newly qualified podiatrists, physiotherapists and all those involved in the diagnosis of foot problems have at their disposal a thoroughly modern text which will continue to be their indispensable diagnostic guide. With its logical and accessible structure, *Assessment of the Lower Limb* will also be invaluable to trainee general practitioners, medical students working in rheumatology, diabetology and orthopaedics, sports therapists and sports medicine trainees. Features a wealth of illustrations, including line diagrams, photographs, and color plates. Presents information in a logical manner imitating the clinical reasoning process. Each chapter can stand on its own for independent reading of the topic covered. Case studies are included to illustrate theories, and the text is fully referenced to encourage further research. Features a thorough re-write of previous edition by new contributors to the chapters on *Methods of Analyzing Gait*, *Assessment of the Skin and Its Appendages*, *The Sports Patient*, and *Assessment of the At-Risk Foot*. Includes entirely new chapters on *Assessment of the Elderly* and *Pre- and Post-Operative Assessment*. Offers new information on epidemiology, assessment technology, new techniques in neurological assessment, assessment of wear patterns on footwear, as well as new imaging techniques. A new co-author and a new team of contributors combine their expertise to present the very latest clinical information.

**About the Author** Linda Merriman was co-editor of the first edition of this now well-established textbook. She is well respected as an educator and an academic but has kept in close touch with the clinical developments in the field of podiatry. She is also co-editor of *Tollafeld and Merriman : Clinical Skills in Treating the Foot* (shortly to be revised by Turner and Merriman).
