Serge Tixa : Atlas of Surface Palpation: Anatomy of the Neck, Trunk, Upper and Lower Limbs, 2e (Netter Basic Science) before purchasing it in order to gauge whether or not it would be worth my time, and all praised Atlas of Surface Palpation: Anatomy of the Neck, Trunk, Upper and Lower Limbs, 2e (Netter Basic Science):

0 of 0 people found the following review helpful. Fine atlas with good and reliable pictures By Customer Fine atlas with good and reliable pictures. Although I would wish for more artery-vein-nerve projections on the surface pictures. All in all the book has a good quality both in pictures, models and anatomical descriptions. I wanted this kind of a book to look up for in clinical work within acupuncture, where a good command of surface anatomy is just essential. 0 of 0 people found the following review helpful. Wonderful By Priscilla Loved the quality of the book, the

photos, and information. Unfortunately I had to return because I did not need it for my class but I will buy it again if need. 1 of 1 people found the following review helpful. Valuable reference book By Kathylikesbooks I purchased this book mainly for the head and neck portion, and am pleased with the level of clarity and detail. I highly recommend this, as the surface anatomy is demonstrated clearly on the model, not just identified with an over-layed sketch.

Palpation is one of the most important aspects in clinical examination and the diagnostic approach enables a better application of the manual techniques used. This book contains 800 precise black and white photographs (many of which have never appeared in written works before) which are spread out over 12 chapters. They clearly illustrate the surface investigation of the different anatomical structures (bones, ligaments, tendons, muscles and neurovascular system) and each is accompanied by a technical description. A reference manual for both students and practitioners, this book is also a methodological guide to a more practical and professional application of anatomy. Written to be both practical and concrete, it is of service to a diagnostic procedure in which palpation is one of the vital methods of clinical examination. It will also prove to be a precise and rigorous tool for a better application of manual techniques practised in the medical or allied health fields. This new edition includes the addition of a rubric entitled "Application" for each photo, 80 new photos and 4-colour anatomical plates by Netter.

About the Author Serge Tixier est cadre formateur en écoles d'ostéopathie, chiropraxie et kinésithérapie. Il est également chargé de cours à l'école d'ostéopathie de Lyon (ATSA) pour les formations initiales et en alternance ainsi qu'à l'institut d'ostéopathie (IFKO) et à l'institut de masso-kinésithérapie (IFMK) de Montpellier.
