A book and author courageously exposes the truth about autism.By CustomerWhat an eye opening book for health careProfessionals and concerned citizens. The information revealed by Dr. Schwartz is shocking and informative. This book should awaken the giant sleeping beast where pro vaccine safety is concerned.2 of 2 people found the following review helpful. This book is the best ammunition to use to start fighting backBy Lorenzo HagertyAfter reading this book I am even more upset than I was before! I now see more clearly the ways that we as a society have been mislead by the CDC, FDA, IOM, the medical establishment, big pharma, and especially the main stream media. This book is the best ammunition to use to start fighting back. Pharmaceutical money given to politicians, doctors, scientists, the media and medical journals, contributes to the suppression of the

truth about autism, its causes, and what can be done about this epidemic. This book is a refreshing look at the underlying causes of autism, including contributing factors such as environmental toxins, vaccines, lack of Vitamin D, etc. Also discussed are specific genetic susceptibilities that predispose certain individuals to become injured. Dr. Schwartz references all his claims in great detail. The only thing that I missed in this book is an index. The autism epidemic has touched millions of people in this country including in my own family, and there is so little help or useful information from those who would be expected to know, i.e. the medical community. Reading this book has educated me and answered many of my questions. Very worthwhile were the scientific studies and the historical perspective presented that are from sources not receiving money from the pharmaceutical industry. He also provides the details that demonstrate that the CDC produced fraudulent studies masking the linkage of vaccines to autism. There are no conflict of interest ties in what Dr. Schwartz presents. He points out that the agencies responsible for promoting vaccinations, the CDC, FDA, IOM, WHO, the American Academy of Pediatrics, and vaccine manufacturers have known for at least the last 18 years that vaccines and their ingredients are not safe and do cause neurological damage in susceptible people. Our own government and its above mentioned agencies are so tied into big pharma's money that it has taken years to prove that the mercury, aluminum and other adjuvants and contaminants in vaccines are major causes of this epidemic. They would rather just say vaccines are safe and effective and that there should be no more safety studies as the science is settled. Science is never settled, or its not science! This book presents a case for the restoration of our rights to medical freedom, true informed consent, with the right to refuse medical interventions we do not want. There is much evidence presented about the corruption and lack of reliability of the information in our so called peer-reviewed medical journals, which are plagued by conflicts of interests among authors, and big pharma advertising dollars which effectively censor any opposition to their party line. The media is totally complicit in hiding any links from vaccines to any damages in humans, especially male children. They are more affected due to having more testosterone which appears to increase the toxicity of mercury. The author fully discloses the controversy surrounding Dr. Andrew Wakefield's Lancet 12 study giving us an understanding of how and why his study was retracted. I have followed this controversy for many years now and learned even more in the two chapters devoted to presenting the real facts of the case. It is all about protecting the huge profits, with no liability for doctors, the pharmaceutical industry, pharmacies, and others promoting/administering vaccines. They purposely exaggerate the benefits while minimizing the risks. Dr. Wakefield is too much of a threat to their bottom line! Californians especially need to read this book to be able to inform and educate their politicians, school leaders, and pediatricians about the autism epidemic, including those on the spectrum, so that they can get laws changed which now require multiple vaccines in order to attend any school in CA. Day care employees must also be vaccinated in order to work in day care and many hospitals require their employees to have yearly flu shots. These laws encourage the continuation of the systematic poisoning of genetically vulnerable adults, and children, who are now overwhelming our school system with their special education needs. Vaccine injury lawyers will find the necessary science and arguments to win their cases and change the laws to allow for to restoration of our medical, philosophical, and religious freedoms. If this issue does not affect you now it surely will in the future if these policies, laws and corruption are allowed to continue. 5 of 5 people found the following review helpful. Brilliant and Insightful book on Autism, by a true expert in the field By Karen Russell Dr. Alan Schwartz is one of the most brilliant and caring holistic physicians I have ever had the pleasure of knowing. People will be able to learn so much from his extensive knowledge and experience. I was once in his clinic and had the pleasure of witnessing a young girl, who previously had NO language, poke her head in his office and begin chatting with him. Dr. Schwartz has tackled a very important subject and has valuable information to share. Karen Russell, Healthy Life Advisors

We are in the midst of an epidemic, and we are being deliberately misinformed. The incidence of autism has rapidly increased in recent years from one child per 10,000 births in the 1970s, to approximately one child per 55 births today. Even so, we are assured by the medical community that this is not really an epidemic; the condition is just being better diagnosed. And we are told that the medical research community does not know what triggers autism, that the etiology is likely genetic, that numerous studies have proven that neither the childhood immunization program nor the mercury-containing preservative thimerosal are causative, and that the immunizations routinely given to babies and young children are beneficial and rarely cause serious side effects. But none of this is true! This pioneering book strips away the lies, deception, misinformation and media censorship regarding the complex etiology of autism and autism spectrum disorders. It documents the numerous factors that have spawned this pandemic and the institutional malfeasance that prevents the truth from reaching the public. Autism Uncensored is extensively referenced and covers in detail not only the overwhelming evidence implicating mercury, thimerosal, aluminum, and other toxic substances as key factors in fostering autism, but also many other environmental influences; like genetically modified foods, gut organisms, and dietary inadequacies; that play a role as well. This book is a must read for every parent, and in particular for those who have a child or relative on the autism spectrum. It is also critical required reading for physicians and politicians who support the current childhood immunization program and who wish to prevent parents from opting out. Read this enlightening, groundbreaking work; keep it on hand for easy reference; and give it to your

family doctor. You will thereby take a giant step toward protecting the health of your children, loved ones, and community. This book is a valuable resource for attorneys representing vaccine-injured children; it is also an eye-opening reference for politicians and pediatricians.
