Kathy D. Blaney MS BB(ASCP)SBB CHT(ABHI), Paula R. Howard MS MPH MT(ASCP)SBB : Basic Applied Concepts of Immunohematology, 2e before purchasing it in order to gage whether or not it would be worth my time, and all praised Basic Applied Concepts of Immunohematology, 2e:

7 of 7 people found the following review helpful. Excellent BookBy Chrissy BThis book is great. It is easy to read and understand. This is probably the best text book for the Medical Laboratory Technology field I have ever owned. I wish there were more like it for the other areas of the lab.1 of 1 people found the following review helpful. Great reference course bookBy Robert thomasRequired text for Clinical Lab science BS, great price and reference text. Thorough and informative, great selection to prepare for certification.1 of 1 people found the following review helpful. Excellent bookBy Penny1Excellent book. This is a very helpful and thorough book. Good basic review. Can be use in any lab work

Clear and accessible, this text addresses the fundamental knowledge and skills you need to work in a blood-banking laboratory. It integrates basic theory genetics, immunology, and immunohematology then adds practical, problem-solving exercises. Clinical scenarios and critical thinking exercises help you apply basic concepts to modern transfusion and blood-bank settings. Experienced authors offer a practical "in the trenches" view of life in the laboratory. A clinical application focus relates concepts to practice and offers examples of using theoretical information in the laboratory setting. Coverage of quality control assurance and regulatory issues includes the "whys" in both reagents and equipment. An entire chapter is devoted to basic genetics and immunology coverage. Blood group systems are described in easy-to-follow, student-friendly terms. Illustrations and tables help you understand critical information. A two-color design brightens the text and makes it more reader-friendly. Chapter outlines, review questions, learning objectives, and key terms are included in each chapter, highlighting and reinforcing important material. Critical Thinking exercises ask you to draw conclusions based on a case study. Chapter summaries include a paragraph, table, or box of the essential information. NEW information reflects changes in the field, including: Different types of DNA testing and uses Automation impact and issues Latest donor criteria from the AABB and the FDA Hepatitis C and HIV NAT testing West Nile testing Bacterial contamination statistics and prevention Bone marrow transplant blood use Peripheral stem cell collection Cord blood collection and use More case studies, examples, and flow charts in the Antibody Detection and Identification chapter help to illustrate principles and practices. Margin Notes are added throughout to reinforce key terms and procedures. More review questions are added for thorough and efficient self-assessment. Expanded Evolve resources include web links, ArchieMD animations, and additional study questions
