World Health Organization : Basic Methods for Assessment of Renal Fluoride Excretion in Community Prevention Programmes for Oral Health before purchasing it in order to gage whether or not it would be worth my time, and all praised Basic Methods for Assessment of Renal Fluoride Excretion in Community Prevention

## Programmes for Oral Health:

This manual reviews practical procedures in the assessment of renal fluoride excretion based on experience from existing national fluoridation programs. The assessment tools will primarily be useful in assisting countries in achieving an effective fluoride exposure. It is a hope that the manual will stimulate oral health personnel and public health administrators to use a systematic approach for managing and analyzing data obtained from different levels of fluoride exposure. Finally, the manual encourages inter-country collaboration on surveillance systems for community programs using fluoride for prevention of dental caries.

About the Author World Health Organization is a Specialized Agency of the United Nations, charged to act as the world's directing and coordinating authority on questions of human health. It is responsible for providing leadership on global health matters, shaping the health research agenda, setting norms and standards, articulating evidence-based policy options, providing technical support to countries, and monitoring and assessing health trends.
