This manual provides basic, practical contact lens information that allows you to gain the knowledge, understanding and skills necessary to perform contact lens fitting. A significant degree of know-how is required to understand and fit

the many lens types and systems. This book starts with the basics and progresses to advanced contact lens fitting in a simplified, highly illustrated manner. It enables you to become familiar with the information essential to fit contact lenses. Advantages and disadvantages of soft and rigid contact lenses are covered, discussing general applications, fitting techniques and the range of lenses available. Complications and problem situations are also addressed, such as pre-existing ocular conditions, sensitivity reactions, and giant papillary conjunctivitis. Other topics include fitting normal, irregular, post-refractive surgery, and post-penetrating keratoplasty corneas and specialized uses for contact lenses. This book was produced in conjunction with CLAO.
