Hikaru Hamano MD, Herbert E. Kaufman MD : Corneal Physiology and Disposable Contact Lenses, 1e before purchasing it in order to gage whether or not it would be worth my time, and all praised Corneal Physiology and Disposable Contact Lenses, 1e:

Even with oxygen permeable lenses, the closure of the eyelids results in relative oxygen deprivation. This text

supports the use of daily disposable contact lenses to reduce the risks of contact lens wear. With a focus on corneal physiology, the many considerations and factors of the use of these lenses are discussed.* Provides state-of-the-art information on the effect of disposable contact lenses on the eye * For all eye care professionals who are interested in the safety of wearing contact lenses *
