Harry J. M. von Piekartz PhD MSc PT MT : Craniofacial Pain: Neuromusculoskeletal Assessment, Treatment and Management, 1e before purchasing it in order to gage whether or not it would be worth my time, and all praised Craniofacial Pain: Neuromusculoskeletal Assessment, Treatment and Management, 1e:

This title is directed primarily towards health care professionals outside of the United States. The authors combine the latest evidence-based knowledge from the fields of orthodontics, plastic and neurosurgery, as well as otolaryngeal treatments, physiotherapy and manual therapy to provide new treatment strategies for clinicians interested in craniofacial problems. This approach is based on the latest clinical reasoning models. Grounded in pain science theory

and modern craniofacial growth concepts, the techniques can be integrated into any manual, neuro-orthopaedic orientated treatment model. This approach can be easily used in the daily clinic and adapted to a variety of patterns of craniofacial pain. Practical, evidence-based and comprehensive Highly illustrated Clearly described manual techniques and management strategies Clinically relevant Includes contributions from leaders in the field Covers adult and paediatric treatment

"Reading through his thought provoking book, von Piekartz provides new clinical theories including a number of functional cranial nerve tests that are entirely novel. The assessment of the vertebral regions was based on Maitlands methodology, which is accessible to all manual therapists including osteopaths and chiropractors....It is rare to find an authoritative commentary on a specialist medical topic that provides an opinion on the ongoing politics of healthcare provision and its management...Pickartz has, with the help of his contributors, provided an excellent addition to the accumulating literature on neurological dysfunction and its physical treatment. His book can be thoroughly recommended to all working in the challenging field of physical therapy and the rehabilitation of head pain and dysfunction." Dr Donald Scott
