0 of 0 people found the following review helpful. CCHF By J. Theilmann Good summary of a variety of issues concerning CCHF. Good starting point with chapters by some of recognized scholars in the field. As always some chapters are being superseded by newer research.

This volume covers major aspects of Crimean-Congo hemorrhagic fever (CCHF) and the virus which causes it. Chapters are written by leading experts in their fields and detail historical, public health, epidemiological, and clinical aspects of CCHF and the genetics and molecular biology of the virus. Additional chapters focus on disease control, tick vectors and infection among animals, both natural and experimental.
