Well, organized but everything is just sooo way too important....which leaves me with Owlsoumpts...where do I start and how do I being and how do I focus...if everything is a priority to itself and everything else. Which leaves me at ease starting at page 1, but skimming through the book as I get through the first section...and wondering if starting with the muscular system or mitochondria should have been the best duelling first start...like neurons and music and other talents that enhance our quality of life and stimulate our bones with their tones or with our touch as we progress in music appreciation and achievement (if we play an instrument or learn how to play an instrument) and the admiration of nature that also helps stimulate our head, bones and brain. After all, it's all built

acoustically for many reason.0 of 1 people found the following review helpful. a patient's reviewBy Diana Carra HaughSince neurology is so complex, neurology appointments are so short, and I have so many questions about what is going on in my head, I decided to educate myself on the subject. After reading 'Adrenaline, the Inner World', I moved on to this text. I was pleasantly surprised that the text is well organized, the narrative is clear, simple and direct and on the whole, eminently readable. I applaud this text for being neither too simple nor too complex for a relatively well educated person to understand. Thanks0 of 0 people found the following review helpful. Great quick referenceBy medmemThis is a fabulous book for quick references and diagnoses. I find it very useful for both the classroom and clinical scenes.
