Other students have looked through this book of mine and then purchased their own, because you can look up any lab value, and then reasons why it might be high, reasons why it might be low, dangerous levels, symptoms related to being high or low, nursing implications on how to correct it or just implications to watch out for with patients with these lab values. Also, this company provides the one year online access with the purchase of this book! So i am able to go to the website from my computer or phone and just type in the lab name and get all of the information without having to flip through my book. Its AWESOME!!!!!!0 of 0 people found the following review helpful.
