From Brand: Amer Public Health Assn : Designing a Modern Microbiological/Biomedical Laboratory before purchasing it in order to gauge whether or not it would be worth my time, and all praised Designing a Modern Microbiological/Biomedical Laboratory:

Most existing clinical laboratories are in desperate need of a variety of improvements, from updated machinery demands to increased security requirements. This publication provides a well-outlined process for the renovation of these aging, obsolete public health laboratories and helps administrators, facility managers, and laboratorians face this

demanding challenge. Environmental issues, security and regulatory requirements, guidance documents, computer links, investigator needs, and fiscal obligations are addressed in a full-process, detailed format. Chapters include risk assessment, design concepts, team organization, safe maintenance of facility operation, and more. All medical laboratory workers, architects, administrators and engineers will need this reference to meet the requirements and challenges of any clinical laboratory renovation.
