From Brand: Wiley-Blackwell : Diabetes Education: Art, Science and Evidence before purchasing it in order to gauge whether or not it would be worth my time, and all praised Diabetes Education: Art, Science and Evidence:

1 of 2 people found the following review helpful. poorly writtenBy paI am very disappointed in this book. Throughout the book there are significant spelling errors. Very frustrating that editor didn't take time to edit book.

Diabetes education is a process, the key to which is establishing a therapeutic relationship with the individual. The overall goal of diabetes education is to enhance the individuals health capability, including their ability to solve problems and apply the learning to self-care. Thus, diabetes education is an interactive process of teaching and learning where information is co-generated. This innovative and thought-provoking new book explores the how of

diabetes education, rather than the what and the why. Diabetes Education: Art, Science and Evidence helps healthcare practitioners teach diabetes effectively from diagnosis onwards and ensure people living with diabetes receive individualised support and information. It enables practitioners and educators to examine and reflect on their practice when managing the person with diabetes. Bringing together all the thinking and experience of the diabetes journey in one text, this book is essential reading for all practitioners and students involved in diabetes care. SPECIAL FEATURES: Features short stories, case studies, illustrative quotes, practice points and reflection points throughout Edited by an internationally renowned expert in the field Contributions from some of the worlds leading diabetes educators This title is also available as a mobile App from MedHand Mobile Libraries. Buy it now from iTunes, Google Play or the MedHand Store.

"This book should be compulsory reading for all health care professionals involved in teaching people with diabetes how to cope with and adjust to their condition." (European Diabetes Nursing, 1 December 2012) "In summary, this book is useful for healthcare professionals working with people with diabetes. There are many short stories, case studies and illustrative quotes read." (Diabetes Update, 1 October 2013) "This book is useful for both beginners and experienced diabetes healthcare professionals. In addition, the messages it portrays are relevant to healthcare professionals working with people with other long-term conditions." (Journal of Diabetes Nursing, 1 January 2013) "This book should be compulsory reading for all health care professionals involved in teaching people with diabetes how to cope with and adjust to their condition." (Practical Diabetes, 1 November 2012) From the Back Cover Diabetes education is a process, the key to which is establishing a therapeutic relationship with the individual. The overall goal of diabetes education is to enhance the individuals health capability, including their ability to solve problems and apply the learning to self-care. Thus, diabetes education is an interactive process of teaching and learning where information is co-generated. This innovative and thought-stimulating new book explores the how of diabetes education, rather than the what and the why. Diabetes Education: Art, Science and Evidence will help health care practitioners teach diabetes effectively from diagnosis and ensure people living with diabetes receive individualised support and information.
