**Sharad Pendsey : Diabetic Foot: A Clinical Atlas** before purchasing it in order to gage whether or not it would be worth my time, and all praised Diabetic Foot: A Clinical Atlas:

Over 120 million people worldwide suffer from diabetes and 85 percent of diabetes-related amputations are preceded by foot ulcer. Understanding the causes of this catastrophe, identifying the sufferers and those at high risk and developing effective preventive strategies and remedies for its consequences has become a major preoccupation with diabetologists in recent years. Diabetic Foot: A Clinical Atlas is primarily devoted to clinical matters with illustrations and case reports depicting varied diabetic foot problems. Divided into eight sections, the book contains 53 case studies and over 600 clinical photographs, as well as a detailed bibliography for further reading.

'This atlas is a welcome addition for anyone involved in the care of the diabetic limb and foot.' - Doody's , July 2005

About the Author Sharad Pendsey is a consultant in diabetology and the Director of Diabetes Clinic and Research Centre, Dhantoli, Nagpur, India.
