The Seventh Edition of Diagnosis and Evaluation in Speech Pathology continues to be the leading text in its field,

providing a practical process approach to the diagnosis and evaluation of speech and language disorders. This easy-to-read, yet comprehensive resource provides a strong foundation in diagnosis and evaluation for students in training and clinicians alike. It develops a rationale for each type of assessment, including both standardized and non-standardized approaches. This text is ideal for practitioners and clinicians who are struggling to stay in tune with the rapidly changing field of Speech-Language Pathology.

This textbook makes an excellent reference book which could be used in individual courses for the various disorders.
