Dietary Reference Intakes DRI Reviewed By Gregory Muncer Hi Folks, I originally became familiar with The National Academy of Sciences when they published the predecessor of The Dietary Reference Intakes book and as it was called then The Recommended Dietary Allowances RDAs. The newer version is a complete Text Book of The Nutrition Subject as we know it today, from the source that establishes the subject standard. Sometimes you have to go to the horse to understand their thinking. I have not finished reading the book yet as to its fullness. This distributed book came fast and clean. I am a happy camper with a book on super health. Thank You and The National Academy of Sciences

Since 1994 the Institute of Medicine's Food and Nutrition Board has been involved in developing an expanded approach to developing dietary reference standards. This approach, the Dietary Reference Intakes (DRIs), provides a set of four nutrient-based reference values designed to replace the Recommended Dietary Allowances (RDAs) in the United States and the Recommended Nutrient Intakes (RNIs) in Canada. These reference values include Estimated Average Requirement (EAR), Recommended Dietary Allowance (RDA), Adequate Intake (AI), and Tolerable Upper Intake Level (UL). To date, several volumes in this series have been published. This new book, Applications in Dietary Assessment, provides guidance to nutrition and health research professionals on the application of the new DRIs. It represents both a "how to" manual and a "why" manual. Specific examples of both appropriate and inappropriate uses of the DRIs in assessing nutrient adequacy of groups and of individuals are provided, along with detailed statistical approaches for the methods described. In addition, a clear distinction is made between assessing individuals and assessing groups as the approaches used are quite different. Applications in Dietary Assessment will be an essential companion to any-or all-of the DRI volumes.

"An essential reference for nutritionists and for those in the health professions who are concerned with planning meals or making recommendations on nutrition."
