Catherine C. Goodman MBA PT CBP, Teresa Kelly Snyder MN RN OCN CS : Differential Diagnosis for Physical Therapists: Screening for Referral, 4e (Differential Diagnosis In Physical Therapy) before purchasing it in order to gage whether or not it would be worth my time, and all praised Differential Diagnosis for Physical Therapists: Screening for Referral, 4e (Differential Diagnosis In Physical Therapy):

0 of 0 people found the following review helpful. Book in perfect condition with CD includedBy FrancesBook in perfect condition with CD included.There are a lot of clinical cases described. Every chapters ends with a good summary and practical questions.0 of 0 people found the following review helpful. Five StarsBy Abbey NilsonCame in on time and as described!0 of 0 people found the following review helpful. Differential Diagnosis for Physical TherapistBy R. Christopher MenhardThe book is thorough and has many case reviews which allowed me to make

practical use of the sophisticated and detailed information which is presented. Plus the DVD has excellent summaries that help build ones personal screens for patientsChris

Written by a leading expert in the field, this comprehensive reference text enables users to properly screen for medical disease to make an informed differential diagnosis. The goal of this text is to teach the Physical Therapist how to determine if the patient has a true neuromuscular or musculoskeletal problem and to determine the specific dysfunction or impairment. This new edition includes a chapter that focuses specifically on pain. It also contains a new chapter on physical assessment as a screening tool and the introductory chapter has been revised to explain the more modern approach of screening. A systems-based approach to differential screening and diagnosis make it easy for Physical Therapists to find information and understand it in light of other systems issues. CD-ROM with screening tools provides Physical Therapists with forms and checklists they can use in the clinical setting. Case studies provide real-world examples. New chapter on how physical assessment provides baseline-screening information to better explain the progression of the screening process. Includes new information on musculoskeletal problems. A separate chapter on pain introduces the concept of pain as a screening tool. An entire section is devoted to systematic origins of pain to demonstrate how regional pain should be approached in screening for particular disorders. Introductory information on the newer medical screening concepts sets the stage for how screening is presented in the rest of the book.
