MD Samuel Milham : Dirty Electricity: Electrification and the Diseases of Civilization before purchasing it in order to gage whether or not it would be worth my time, and all praised Dirty Electricity: Electrification and the Diseases of Civilization:

0 of 0 people found the following review helpful. Excellent Book on Dirty Electricity and connection with Diseases of our timeBy JOHN H WEBBA straight forward read by an eminently qualified Medical Doctor who dug deeper into specific cancer clusters in a public school in California proved that constant exposure to Dirty Electricity was the cause of the cancers, but was stonewalled. Apparently, the electrical generating industry have known about and have

done nothing about excess electrical tsunamis they themselves call 'Dirty Electricity'. Dirty electricity rides on top of the usual 50/60 Hz 110/220 Volt electricity wired into our homes and businesses. As it turns out, constant exposure to the 'Dirty Electricity', EMFs of all sorts including cell phone emissions and cell phone towers can and do cause cancer, leukemia, diabetes and a host of other 'diseases of civilization'. The science is slowly accumulating in spite of massive resistance to facing the issue. Sounds a lot like big tobacco's response to 'smoking causes lung cancer.' How long will it take to overcome well funded resistance and make the needed changes? In the mean time, armed with the scientific information in this book, along with the book 'Electromagnetic Fields, by B Blake Levitt', and other resources, we can at least make some reasonably intelligent decisions to protect our family. Dr Milham MD winds up with specific recommendations on monitoring meters and a short reading list. I also purchased the recommended Trifield Broadband meter directly from the manufacturer online as an additional resource (trifield.com). I also purchased the GreenWaveFilters.com plug-in Meter and plug-in filters to detect and eliminate the dirty electricity in my home. Highly recommended read. 3 of 3 people found the following review helpful. An excellent book By Kelley Eidem, author of The Doctor Who Cures Cancer This review is being written for a good friend of mine who suffers from exposure to electromagnetic fields so much that she can't use a computer. I even had to order the book for her since her sensitivity is so great. Florescent lights also give her bad headaches. Since she read the book and not me, my review won't have much detail from the book. She was very impressed with the information. She related to me various parts from the book regarding the impressive credentials of the public health physician and his many findings from a lifetime of looking at these issues. She liked the book more than "Cross Currents" by Dr. Robert Becker, so if you are considering one or the other, maybe her recommendation will assist you. Although I don't recall the exact details of what my friend told me about the outcomes of various studies, I do recall being impressed by the findings at the time. My friend found it easy to trust the studies because she herself has personal experience with the effects of electromagnetic fields. 2 of 2 people found the following review helpful. Dirty electricity By Leonid R. Koff A well written and insightful book. It is rare to see a study that uncovers the relationship between new electronic technology infusion into biological/human and animal populations and incurring diseases. WE are all bio-electrical creatures and our cells are very sensitive to all electromagnetic radiation. My personal experience with people in my life and their health challenges as a result of prolonged exposure to "dirty" magnetic fields, resulting from shabby electrical systems' construction, and ignorance of this effect in related designs confirm this. Everyone needs to become conscious of the magnetic pools were are being immersed in, especially with the proliferation of cell-towers and cell microwave-based systems.

When Thomas Edison began wiring New York City with a direct current electricity distribution system in the 1880s, he gave humankind the magic of electric light, heat, and power; in the process, though, he inadvertently opened a Pandora's Box of unimaginable illness and death. Dirty Electricity tells the story of Dr. Samuel Milham, the scientist who first alerted the world about the frightening link between occupational exposure to electromagnetic fields and human disease. Milham takes readers through his early years and education, following the twisting path that led to his discovery that most of the twentieth century diseases of civilization, including cancer, cardiovascular disease, diabetes, and suicide, are caused by electromagnetic field exposure. In the second edition, he explains how electrical exposure does its damage, and how electricity is causing our current epidemics of asthma, diabetes and obesity. Dr. Milham warns that because of the recent proliferation of radio frequency radiation from cell phones and towers, terrestrial antennas, Wi-Fi and Wi-max systems, broadband internet over power lines, and personal electronic equipment, we may be facing a looming epidemic of morbidity and mortality. In Dirty Electricity, he reveals the steps we must take, personally and as a society, to coexist with this marvelous but dangerous technology.

About the Author Dr. Samuel Milham is a physician-epidemiologist specializing in public health. He has more than one hundred scientific publications, many dealing with the health effects of electricity. In 1997, Dr. Milham was awarded the Ramazzini prize for his pioneering work in describing the occupational cancer risks of electromagnetic fields. He lives in Olympia, Washington, and Indio, California, with his wife, Sherry, and dog, Monte.
