This hands-on resource for students and professionals in social work, counseling, nursing, and mental health encompasses the best and most current evidence-based interventions for effectively responding to the needs of vulnerable populations following disasters. Using an all-hazards perspective, the book also provides a dedicated section containing population-specific personal preparedness considerations and discusses the role of preparedness in mitigating negative consequences. The resource is unique in its provision of vital information for locating requisite assessment tools, preparedness checklists, and forms. It also provides a list of mobile applications offered through national organizations. The resource addresses the specific psychosocial needs of vulnerable populations after a disaster.
