Jack J. Kanski MD MS FRCS FRCOphth, Stanislaw A. Milewski MD, Jack Kanski, Stan Milewski : Diseases of the Macula before purchasing it in order to gage whether or not it would be worth my time, and all praised Diseases of the Macula:

0 of 0 people found the following review helpful. I am an ophthalmologist from Russia.By Ekaterina PavlovaI like Kanski. It's my second book from him. It's a very very good book! You must have this book in your library. Good paper, so many very fine photos and some new things about anatomy, signs, symptoms and diseases of macula.0 of 0 people found the following review helpful. a must haveBy C. A. R. pIf you are in the eyehealth area you must have this complete guide to the macula. fine explanations and outstanding photography

Royal Society of Medicine Book Awards 2002Highly CommendedBritish Medical Association Book Awards 2003Highly CommendedDiseases of the Macula provides a practical and clinically oriented approach to the diagnosis and management of macular disorders. It covers not only diseases that primarily affect the macula, such as age-related

macular degeneration, but also those that might have an indirect but never-the-less significant effect on macular function, such as vascular and inflammatory diseases. Many diseases in this book are illustrated with brief case studies, to help bring them to life and facilitate learning. Liberally illustrated throughout with over 400 photographs (300 in full colour), and supplemented with case studies, this book is carefully organised so that the most important conditions are described towards the beginning of each chapter, with the less common conditions following. This highly accessible and practical title will be invaluable to the general ophthalmologist and to optometrists, and particularly to trainees. With over 400 top quality clinical pictures, this book enables easy visual recognition of macular diseases. Covers all disorders associated with macular degeneration not only age-related macular degeneration. Includes case histories which is an invaluable and unique diagnostic tool that facilitates learning. Each chapter covers the most common disease first, followed by less common conditions which guides the reader towards an accurate diagnosis. Written as a quick and easy reference.

About the Author Jack Kanski is arguably the best-known author in ophthalmology worldwide. His textbook *Clinical Ophthalmology*, published by Butterworth-Heinemann, is a competitor to our *Spalton*, and is the current textbook of choice for ophthalmology trainees and optometrists worldwide. He is also the author of our extremely successful *Ophthalmology: Clinical Signs and Differential Diagnosis*, published in 1998 under the Mosby imprint. In the words of one UK professor of ophthalmology: "Any book with Jack Kanski's name on it is likely to be a winner. He has an excellent track record and a large number of trainees, seniors and libraries are likely to buy the book simply on this basis."
