Management of bladder cancer provides a single, comprehensive reference source that incorporates all the latest information regarding bladder cancer. The text covers epidemiology and natural history of bladder cancer as well as

latest findings regarding the genetics and molecular biology of the disease. Diagnostic and staging evaluation of both non-muscle invasive and invasive bladder cancer is discussed. The text incorporates chapters summarizing new findings regarding markers for the diagnosis of bladder cancer and new diagnostic techniques to enhance traditional methods such as cystoscopy. Risk stratified treatment of non muscle invasive bladder cancer including various approaches to intravesical therapy are reviewed. Current guideline based approaches to management and new data regarding diagnosis and prognostication of muscle invasive bladder cancer is analyzed and summarized. The application of chemotherapy for muscle invasive and advanced disease is discussed and the evidence based application of multimodality therapy highlighted. Finally, gaps in current knowledge and areas for future research are highlighted. Ongoing important clinical trials which could imminently yield significant new knowledge is discussed. Authored by experts in their respective fields, Management of Bladder Cancer will serve as a easy and complete reference source for clinicians, researchers, individuals in training, allied health professionals and medical students in the fields of Urology, Medical Oncology, Radiation Oncology, Basic and Translational Science and Epidemiology.

From the book reviews: The target audience is researchers, clinicians, trainees, allied health professionals, and medical students. Given the emphasis and specificity of the chapters on early stage bladder cancer, this book seems most geared to urologists and urology trainees. This is a very easy to use, clearly and expertly written, case- and clinical scenario-based reference that will be helpful to all who treat and study bladder cancer.
