**Department of Defense : Medical Evacuation and Combat Risk Management** before purchasing it in order to gage whether or not it would be worth my time, and all praised Medical Evacuation and Combat Risk Management:

A great value! Two military manuals combine into one book. If you purchase both books separate you will pay more for the books plus shipping cost. Medical Evacuation: Provides doctrine, as well as techniques and procedures for

conducting medical evacuation and medical regulating operations. Medical evacuation encompasses both the evacuation of Soldiers from the point of injury (POI) or wounding to a medical treatment facility (MTF) staffed and equipped to provide essential care in theater and further evacuation from the theater to provide definitive, rehabilitative, and convalescent care in the continental United States (CONUS) and the movement of patients between MTFs or to staging facilities. Medical evacuation entails the provision of en route medical care; supports the joint health service support (JHSS) system; and links the continuum of care. In addition, it discusses the difference between medical evacuation and casualty evacuation (CASEVAC), as well as coordination requirements for and the use of nonmedical transportation assets to accomplish the CASEVAC mission. Combat Risk Management: The manual is intended to help commanders,<sup>1</sup> their staffs, leaders,<sup>2</sup> and managers develop a framework to make risk management a routine part of planning, preparing, and executing operational missions and everyday tasks. This framework will allow soldiers to operate with maximum initiative, flexibility, and adaptability.
